

# **Peach Mildew Program**

**Sulfurs**

**Stroblurins**

**Abound**

**Pristine**

**Gem (Flint)**

**Dmi's**

**Rally (Stride)**

**Orbit (Bumper)**

**Elite (Orius)**

**Start at shuck fall and continue until pit hardening  
about June 15-22<sup>nd</sup> in the Yakima Valley**

**If just sulfur, spray every 7 days and re-spray  
immediately after each rain.**

**If using rotation with DMI's or Strobilurins, spray  
every 7-10 days thru pit hardening.**

**In high risk blocks, during warm temps, (May) you  
may combine sulfur & DMI or Strob.**

**Young vigorous trees are the worst, & some specific  
varieties.**
